

Team Contract

Team Name: Group B

GOALS: What are our team goals for this project?
What do we want to accomplish? What skills do we want to develop or refine?
1. Develop a modular, scalable digital forensics system that improves processing efficiency by 60% over conventional methods. 2. Ensure compliance with GDPR, NIST standards, and forensic best practices for court-admissible results. 3. Refine technical skills in Python, Docker, encryption protocols (AES-256, TLS 1.3), and forensic tools (The Sleuth Kit, ExifTool). 4. Implement Agile-Spiral methodologies to iteratively address risks like data tampering and network reliability.
EXPECTATIONS: What do we expect of one another in regard to attendance at meetings, participation, frequency of communication, the quality of work, etc.?
1. Attend bi-weekly sprint meetings (virtual/in-person) and daily stand-ups during critical phases. 2. Respond to team communications (Slack/email) within 24 hours. 3. Submit code/documentation drafts 48 hours before deadlines for peer review. 4. Maintain forensic-grade code quality (e.g., NIST-certified hashing, thread-safe operations).
POLICIES & PROCEDURES: What rules can we agree on to help us meet our goals and expectations, such as preparatory tasks, generating ideas, evaluating outcomes?
1. Task Management: Use Jira for tracking user stories (e.g., "Implement SFTP retries") and Git for version control. 2. Code Reviews: Mandatory pull requests with two approvals before merging to the main branch. 3. Documentation: All modules require UML diagrams and inline comments adhering to PEP8 standards. 4. Conflict Resolution: Escalate unresolved disputes to the project lead for mediation; majority vote if deadlocked.
ROLES: Which roles do we need in this project and how do we allocate them? Will there be a project lead? Is there a need to rotate roles?
1. Project Lead (Mansour Saeed): Oversee Agile-Spiral workflow, coordinate integration testing, and liaise with stakeholders. 2. Technical Lead (Ali Alhammadi): Design core agents (Search, Processing), validate NIST/GDPR compliance, and manage Docker deployment. 3. QA & Communications Lead (Abdulla Almessabi): Implement SFTP/TLS 1.3 (Communication Agent), conduct unit tests, and maintain the blackboard database. Roles are fixed but tasks will be redistributed if bottlenecks occur.

CONSEQUENCES: How will we address non-performance regarding these goals, expectations, policies and procedures? How do we resolve disagreements?

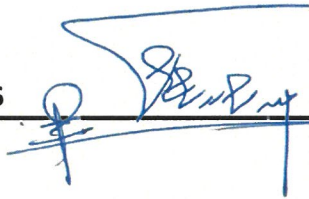

1. Missed Deadlines: First offense: verbal reminder. Second: redistribute tasks + written report. Third: Escalate to instructor.
2. Quality Issues: Code fails peer review? Revise within 24 hours or pair-program with lead.
3. Disagreements: Majority vote after 30-minute discussion; unresolved issues documented for post-project review.

By signing this contract, we confirm that:

- we have participated in formulating these goals, expectations, roles, procedures, and consequences as stated in this contract.
- we agree to abide by the contents of this contract
